Tired of ADA signage regulations stifling your creativity?
 Do you have a beautifully designed sign system that lacks braille?
 Do you fear that full compliance requires ugly cookie-cutter signage?

- **Retrofit pre-ADA signs**
- **Create ADA sign designs with fewer restrictions**
- **Alternative to cookie-cutter signage systems**
- **Granite, metallic & wood-grain finishes, and many colors.**

The ADA Sign Design Dilemma

The signage section of the ADA code seems to put extremely limiting requirements on the design of a compliant sign, especially when you look at braille & tactile signs that also serve a visual function. The fact is, visual and tactile requirements are covered separately in the code. For that reason, the ADA allows for much more flexibility than most people might believe.

The **ADA/InvisiTouch™** products allow designers to take full advantage of the code separation of visual and tactile sign elements. The required tactile characters and braille are virtually invisible, yet perfectly readable by touch. The InvisiTouch section can be completely separate, or part of a unified design.

brushed metallic accent bar with InvisiTouch™ ADA elements fully compliant w/ tactile requirements.

Visual sign field governed solely by the visual section of the ADA sign code.

	text min.	required visibility	required contrast	required non-glare finish	text max.	typeface options
Standard Tactile Sign	5/8"	yes	yes	yes	2"	upper case sans serif
InvisiTouch™	1/2"	no	no	no	*no max.	*upper & lower case/serifs OK

* visual sign portion only - independent from InvisiTouch™
